

Energy and Water Efficiency Program for Nonprofit Childcare Centers

Elevate Energy helps nonprofit childcare centers cut operating costs by implementing energy and water-saving improvements. As a nonprofit organization with experience helping thousands of building owners save money and energy, we make it as easy as possible to improve your facility. Organizations we work with save thousands of dollars on operating costs, redirecting valuable resources toward serving their children and communities.

What to Expect

1. Free Building Analysis

Elevate Energy will conduct an on-site analysis of your facility. This involves gathering information on how the building is used (hours of operation, etc.), past utility bills, and a walk-through of the building structure, systems, and equipment. This is free and non-committal.

2. Energy Use Report

After reviewing your current energy and water use, Elevate Energy will provide a custom report with a menu of recommendations for improvement options. We will work with you to review and prioritize the most cost-effective efficiency opportunities for your facility, along with any beneficial health and safety recommendations. You, as the childcare provider, will decide if you want to move forward or not, and what improvements you'd like to have completed at your facility. This report is free!

3. Financing and Incentives

Elevate Energy will help childcare centers think about their options to pay for changes or upgrades. These financing options may include utility rebates, potential grant dollars, and affordable, flexible financing through IFF. Elevate will help with the paperwork and the application process to make it easy for you to get the help you need to pay for building upgrades.

4. Construction Management and Oversight

If you need construction changes, Elevate Energy will help throughout the construction process – from finding qualified contractors, to reviewing bids, monitoring installation, and ensuring quality control. We will then provide annual savings reports after the improvements are complete, that show how much money you saved by making changes to your energy use!

Benefits

- Reduce utility costs
- Free assessment and report on how to save money by cutting your energy and water use
- Increase comfort, health, and safety for your staff and children
- Put financial savings back to your mission and organization
- Free support and help from highly-qualified energy experts
